Plastic Laboratory Bottles, Biological Stain Bottle Kit

The set of 5 assorted Azlon® stain series driplok venting wash bottles come pre-printed for 5 popular biological stains: Lugols, Gram Iodine Solution, Crystal Violet, Gram Color De-coloring Solution, Gram Iodine Solution and Safranin Solution. The printed information on these 250 ml bottles includes hazard warning symbols and instructions for use. The Azlon® driplok bottles feature the only venting system that dispenses more efficiently than a standard wash bottle due to its patented two-way ball valve system. A build-up of vapor pressure within conventional wash bottles can force solvents and stains through the spout, causing drippage of flammable materials, creating potential safety hazards. The Azlon® driplok venting system consists of a valve specifically designed to allow volatile vapors to escape when not in use, but seals completely when in use to dispense a powerful, spatter-free jet of solvents or stains. These stain bottles feature a wide mouth for easy filling. Bottles meant for dark-colored stains are printed in light colors for easy recognition of contents.
