Wash Bottles, Biological Stain Wash Bottle Kit

The set of 5 assorted stain series driplok venting wash bottles in each case, come pre-printed for 5 popular biological stains: Lugols, Gram Iodine Solution, Crystal Violet, Gram Color De-coloring Solution, Gram Iodine Solution and Safranin Solution. The printed information on these 250 ml bottles includes hazard warning symbols and instructions for use. The driplok bottles feature the only venting system that dispenses more efficiently than a standard wash bottle due to its patented two-way ball valve system. A build-up of vapor pressure within conventional wash bottles can force solvents and stains through the spout, causing drippage of flammable materials, creating potential safety hazards. The Azlon® driplok venting system consists of a valve specifically designed to allow volatile vapors to escape when not in use, but seals completely when in use to dispense a powerful, spatter-free jet of solvents or stains. These stain bottles feature a wide mouth for easy filling. Bottles meant for dark-colored stains are printed in light colors for easy recognition of contents.
