Clear Glass Sample Vials in Partitioned Tray w/ Marking Area and Black Phenolic Lined Caps

These clear glass sample vials are part of the aqueous series, and come with solid-top black phenolic closures with 14B white rubber liners. Both cap and liner are autoclavable and have substantial resistance to chemicals, acids and bases. This combination is ideal for general sampling needs without the added cost of Teflon. Vials feature large white marking areas for easy sample identification.

The glass sample vials are packaged in Lab File corrugated trays with partitions. Caps come attached to vials. Vials and rubber-lined caps can be autoclaved.
