Pipettes, Pasteur Pipettes, Disposable Pipettes

SKS Science offers disposable pasteur pipettes in a variety of useful sizes, tip shapes and bulb draw amounts. The LDPE pasteur pipettes are made of unbreakable plastic, which reduces risk of contamination and broken glass if the pipettes are dropped. These pasteur pipettes could be useful in many biology, microbiology and medical applications as they are non-toxic and inert to most biological fluids and feature a low-affinity surface which reduces loss of cells and proteins. The pasteur pipettes can also be refrigerated or used with liquid nitrogen, and can be used in temperatures as low as -196 ° C. These one-piece disposable plastic droppers offer convenience in the laboratory as there is no need to match up bulbs and pipettes as with many other disposable droppers. The disposable pasteur pipettes produce drops of uniform size, and many models of the pipettes also feature molded graduations. Please Note: These items are non-sterile* P200-56 has a 1.9 ml bulb draw ** P200-52 has a 3.1 ml bulb draw
