

Laboratory Equipment, BenchBlotter Platform Rocker

The BenchBlotter is the first platform rocker to be specifically optimized with the ideal rocking speed and tilt angle for blot washing, gel staining/destaining and hybridization applications. Available with an optional dual platform accessory, the BenchBlotter offers a sizeable work space, while maintaining a compact footprint and low profile design.

Lightweight and easy to carry, it can be easily transported from the lab bench to a cold room or incubator. The large load capacity (7 lbs.), optional dimpled mat for centrifuge tubes and multiple platform tie-down points, make this rocker suitable for a wide variety of general purpose applications.
