

Glass Laboratory Bottles, Clear Glass Media Bottles w/ Safety Coating (Caps Not Included)

These clear glass media bottles feature a plastisol coating for safety. If dropped, glass shards and the contents of the bottle are contained by the plastic coating, keeping exposure to potentially hazardous materials as well as cleanup, to a minimum. Media bottles are constructed of USP Type I clear borosilicate glass, and have graduations and a white writing area for convenient organization and identification of bottles and their contents. These clear glass media bottles are sold without caps - compatible black phenolic screw caps may be purchased separately with a variety of liner types. Media bottles are autoclavable.
