

Histology Supplies, Swingsette Disposable Tissue Processing/Embedding Cassettes

These disposable plastic cassettes hold tissue specimens during processing/embedding, as well as in storage. Molded from a special high-density polymer, they keep specimens safely submerged in liquid and are totally resistant to the chemical action of histological solvents. The efficient flow-through slots maximize fluid exchange and ensure proper drainage. These cassettes feature a special hinge holding the base and cover together. This hinge allows cassettes to be opened and closed as often as necessary. The cover can be removed and re-inserted easily without danger of specimen loss. Three frosted writing surfaces are made available, including the anterior one at a 45° angle. Available in 11 non-cytotoxic, non-metallic colors, each case contains 3 boxes of 500 cassettes each, made of special high-density acetal polymer for chemical resistance.
