

# UNISLETTE™ Disposable Biopsy Processing/Embedding Cassettes

Opt for these UNISLETTE™ cassettes for biopsy processing work. Each cassette was molded from a high density polymer, and features several evenly sized openings. With the specimens placed inside, and the closed cassettes submerged in liquid, these openings were designed to offer an even flow of fluid exchange. Additionally, they allow for proper drainage, all important steps in the embedding process. These cassettes come as a single component, the lid is securely attached to the base. Easily snap into place by closing the lid and gently pushing down until it latches, open the lid by pulling up. This M506 series is similar to the M505 series except the M506 is specifically designed to hold biopsy specimens during the embedding process. These cassettes are available in 11 non cytotoxic, non metallic colors.

Each SP option (500/cs) is neatly packaged with 500 cassettes in one small box, while the bulk options (1,500/cs) contain 3 boxes of 500.
