

Microscopy Supplies, Tamper Evident Microscope Slide Mailing Jars

These 12 ml tamper evident plastic jars are intended for the secure shipping and storage of glass microscope slides. The jars are made of natural polypropylene plastic, and will hold up to 4 standard size 75 x 25 mm (3 x 1") glass slides when inserted vertically. The inside of the slide mailing jar is slotted to keep the slides from touching each other.

The slide mailing jars also come with compatible pink HDPE plastic screw caps that are both leak-proof and tamper evident, to ensure that slides have not been tampered with during transport. The slide mailers can be used with or without this locking mechanism.

These plastic slide mailing jars could be perfect for transportation of slides between doctors' offices and the lab, or for use with slide conveyors.
